Title: UREC Project Succeed Progress Tracking System

Project:

This project will be the main software UREC uses to track the progress of “Project Succeed.” It is a program responsible for providing assistance to future small business owners as well as people below the poverty line by providing counseling classes and financial advising to those in need. Project Succeed Progress Tracking System will monitor, record, and show how project succeed clients benefit from their services, track their progress, and record all financial data involved in that process.

Problem:

UREC is a non-profit organization that depends on both government and private funding to deliver services to their clients. As it is essential to provide statistical data and progress records to those responsible for funding “Project Succeed”, UREC needs a software that tracks progress and generates useful reports to help UREC achieve their mission.

Impact:

The project will give UREC the tools to better convince its investors to continue funding project succeed increasingly. Consequently, UREC will be able to provide not only financial services but also financial education. On the other hand, the tracking system will help UREC internally by allowing it to better execute its mission through developing better management strategies based on the collected information.

Motivation:

Our group feels it is essential for every class in the community to have a chance of success all the way from small business owners to people below the poverty line. Fortunately, UREC is focused on helping both—and so are we. Therefore we are committed to providing UREC with the tools they need to achieve their community assistance goals. We also understand that it is very difficult to convince either the private sector or the federal government to invest in UREC without clear data that show UREC’s progress every step of the way. This is why we feel that our time will be well spent by providing UREC with “UREC Project Succeed Progress Tracking System.”
